Profile

Electronics & Communication Engineering undergraduate with strong hands-on experience in robotics, autonomous systems, and industrial electronics. Proven contributor in national-level competitions and industrial QA environments.

WORK EXPERIENCE

QA - Intern , Streamline Controls Pvt. Ltd.	06/2025 – 07/2025
- Inspected, tested, and processed ~500 PCBs across multiple industrial applications. - Performed functional verification and fault identification to ensure quality and reliability. - Designed and implemented basic industrial control circuits used in PLC-based systems. - Gained hands-on exposure to industrial electronics workflows, from validation to deployment. - Learned and applied PCB design fundamentals, including schematic capture and layout basics.	

EDUCATION

Birla Vishvakarma Mahavidyalaya , B.Tech in Electronics and Communication Engineering	06/2023 – Present Anand
Vishvaniketan Shanti Asiatic School , HSC	07/2021 – 03/2023 Ahmedabad

SKILLS

Embedded Systems & Robotics	Autonomous Navigation & Control
Computer Vision (OpenCV)	Electronics Debugging & QA
PLC Basics & Industrial Electronics	Works effectively under pressure

ORGANIZATIONS

The Robotics Society(BVM - Student Branch) , Joint Secretary	08/2025 – Present
- Orchestrate technical workshops and seminars, bridging the gap between academic curriculum and industry trends in robotics. - Coordinate team activities and logistics for student chapter events, ensuring smooth execution and high member participation. - Collaborate with faculty and industry experts to organize guest lectures and hands-on training sessions for fellow students.	

PROJECTS

RoboFest 5.0 Gujarat - IGVC

10/2025 – 03/2026

- Designed and developed an Intelligent Ground Vehicle (IGV) qualifying for the final stage in 3rd position.
- Configured vision-based perception and decision-making for real-time autonomous navigation and obstacle handling.
- Developed steering and motion control logic enabling reliable autonomous traversal over varied terrain.
- Engineered a terrain-adaptive mechanical structure to improve stability and mobility during autonomous operation.

Robofest 4.0 Gujarat – Autonomous Maze Solving Robot

06/2024 – 01/2025

- Created and built a 10 x 10 cm stacked autonomous maze-solving robot.
- Constructed embedded control and navigation logic for real-time maze exploration and path decision-making.
- Fabricated a compact electronics architecture within strict size constraints.
- Advanced to the final round, competing against top teams in the maze-solving category.

DD Robocon-2024

06/2023 – 05/2024

- Served as Electronics Lead for the autonomous robot (Robot - 2) at DD Robocon India 2024, contributing to a 4th-place national finish.
- Built and validated the embedded electronics and firmware stack for autonomous operation, including motor control, sensor interfacing, and system coordination.
- Devised control and decision logic for Robot - 2 using camera vision, ToF distance sensors, and IMU data for reliable autonomous task execution.
- Integrated and debugged hardware-software interactions, resolving timing, noise, and power-related issues.

Roboracer

02/2024 – 03/2024

- A microcontroller-based car which uses Bluetooth connection to take inputs and heavy-duty motors and motor drivers for the movement of the car
